Skin Lift ampoules *an effective solution for beautiful* *mature skin!*

The weather, environment, our lifestyle and our own metabolism are potential sources of premature skin aging. Its visible consequences are: dehydration, loss of elasticity or age spots. Aging means the collapse of the skin structure, the weakening of cell communication and the slowing down of metabolic functions in all skin cells.

„Time is running and my skin is aging - what can I do?“

This is a question you've probably asked yourself many times. Despite a healthy lifestyle, proper diet and good genes, we cannot stop the time. However, we can slow down the aging process. After crossing the magic barrier of 40 years, our skin begins to experience a series of changes that require appropriate adjustments to our daily care. The skin becomes drier, loss of elasticity becomes more and more visible and wrinkles may get deeper. The skin can also lose its radiance and balance and become more prone to discoloration.

Here are some tips to help you take care of your skin after 40:

- **Exfoliate:** Regular use of enzymatic peeling or acids can help increase radiance and improve skin texture.
- **Moisturize:** Choose moisturizing creams and serums that will provide your skin with intense hydration.
- **Nourish:** Use foods rich in nutrients such as vitamins A, C and E, peptides and antioxidants. They will help to strengthen the skin, improve its elasticity and fight the harmful effects of free radicals.
- **Care for the neck and décolletage:** do not forget to care for the neck and décolletage areas. These parts of the body are also subject to the aging process and require proper care.

However, there is more to mature skin care than basic steps. It's a process that takes time and patience, but it's worth investing in products that will help keep your skin looking young. Take care of your skin and see how much you can gain!

How should you take care of it?

The key to mature skin care is hydration, nourishment and regeneration. Choose cosmetics that are specifically tailored to the needs of mature skin. Remember that regularity and patience are the key!

What is the difference between a serum and an ampoule?

What is the difference between a serum and an ampoule?

At a mature age, we intuitively know what is good for our skin, the choice of products for mature skin is huge and it is hard to figure out what will be the best for us. However, it is worth reaching for products for special tasks. Such a product can be a specially concentrated ampoule - often containing a higher concentration of active ingredients compared to the serum. Concentrated ampoule formulas enable effective skin care. An additional advantage of the ampoules is the precise measurement of the amount of the product, which allows you to accurately determine the amount needed to achieve the desired effects. Compared to the serum, ampoules also differ in the way they are stored. Due to the hermetic packaging, the amount of preservatives in the ampoules can be limited, which is beneficial for the skin.

So should we give up the serum in favour of ampoules? This decision depends on our preferences and skin condition. The best solution is to use the serum in daily care, and sometimes, several times a year, to carry out treatment with ampoules.

Skin lift - lifting and nutrition above all!

You will fall in love with our Skin lift ampoules from the first use. Why? Because you will notice the effect of their operation after just one use. They instantly tighten your skin, providing a long-lasting moisturizing effect. Thanks to the treatment, your skin will improve its elasticity and the face oval will become lifted. In addition, the skin will regain its smoothness and wrinkles will become less visible. Improving the tension and hydration of the skin will make your skin look simply younger!

Revitalization of demanding skin thanks to special ingredients!

DMAE - it is an ingredient for special tasks. We added it to our ampoules to provide the skin and the oval of the face with a strong and immediate lifting. We have selected an ingredient in advanced encapsulation technology, thanks to which the active substance is released gradually, even up to 12 hours. DMAE as a precursor of acetylcholine (neurotransmitter) contributes to the overall improvement of skin condition, giving an immediate and long-lasting lifting effect. It exhibits anti-aging properties, reduces wrinkles and works effectively against inflammation, while moisturizing the skin.

A network of natural glucopolymers from Tara tree galactomannans and galactans from *Kappaphycus alvarezii* red algae - found in our ampoules because it is a multifunctional ingredient that comprehensively improves the appearance of the skin. It creates a non-occlusive protective barrier on the skin against external impurities and irritations. It has a lifting and smoothing effect, thanks to which it reduces the visibility of wrinkles. In addition, it reduces the visibility of skin pores and improves skin radiance.

Organic silicon - we used it in our product, because it is a „close friend” of collagen, without its proper level, we cannot count on proper collagen synthesis. Silicon is found in almost the entire human body and although it constitutes only 0.0068% of the body composition, it is one of the microelements that plays a significant role in the processes taking place in the body. Its amount, like collagen, in our body decreases with age.

The loss of silicon, a key ingredient in the skin that binds it together and contributes to the organization of connective tissue and the ability to stabilize processes in the skin, contributes to its premature aging. Silicon is necessary to maintain skin hydration, maintain its elasticity and firmness. This ingredient in particular restructures the skin, contributes to the stimulation of fibroblasts and collagen, the skin becomes soft, firm, denser and more elastic and wrinkles are smoothed.

Proteoglycans of marine origin enclosed in liposomes - are responsible for increasing density and fir-

ness. Proteoglycans play an important role in maintaining the proper structure and elasticity of the skin and in preventing the signs of aging. We used them to improve the elasticity and firmness of the skin and its hydration by storing water in the skin, as well as to stimulate the regeneration and repair capacity of the skin, thus affecting its overall appearance, making it more radiant and healthy. Thanks to the use of liposome technology, proteoglycans work more effectively and efficiently.

Argireline is a synthetic hexapeptide formed from six natural amino acids that are a safe alternative to botulinum toxin. It increases muscle rest and reduces the process of wrinkle formation. The mode of action of argireline is natural, it prevents the formation of mimic wrinkles, evens out the skin structure, stimulates skin cells to produce collagen.

Caviar extract - consists of 27% beneficial proteins that have the ability to increase cellular metabolism and stimulate the production of collagen from a group of specialized skin cells called fibroblasts. The rest of the composition contains saturated and polyunsaturated fats (15%) and carbohydrates (33%). It has a high content of minerals that strengthen the structure of cell membranes, protecting the inside of cells from the so-called oxidative stress, it also contains vitamins. Caviar extract deeply moisturizes the skin, stimulates its regeneration, has antioxidant properties and protects it against harmful UVA radiation. It is worth noting that caviar ingredients are absorbed without allergic reactions. The result which you will notice on your skin after using this ingredient is a younger, energetic and radiant facial expression due to the fact that fine lines, wrinkles and blemishes will be noticeably reduced.

Hyaluronic acid strongly moisturizes and helps to fill wrinkles. It contributes to the reconstruction of damaged epidermis, creates a protective film on the skin that prevents moisture loss, smoothes, firms and improves skin elasticity.

Fish collagen extracted from fish skins using a method patented in Poland. It is a natural source of peptides that freely penetrate the epidermis and stimulate fibroblasts to increased activity. It hits the cause of wrinkles - collagen deficiency. It slows down the aging process by moisturizing, toning and regenerating the skin.

Skin lift ampoules will provide your skin with many benefits:

- ✓ Instantly tighten the skin.
- ✓ Provide the effect of long-term and immediate hydration.
- ✓ Improve skin elasticity.
- ✓ The oval of the face becomes lifted.
- ✓ The skin regains its smoothness.
- ✓ Wrinkles become less visible.
- ✓ You will notice an improvement in skin tension and hydration.
- ✓ The skin becomes visibly rejuvenated.
- ✓ After treatment with ampoules, the skin becomes thicker.

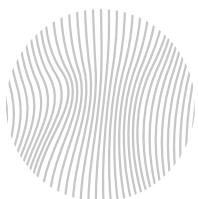

How to use it:

- Clean the face, neck and cleavage from make-up and impurities, shake the ampoule.
- Open the glass ampoule with a tissue by breaking its neck at the marked spot. Do it vigorously.
- Apply the concentrate on your hand, then gently massage into the skin of the face, neck and cleavage, with upward movements.
- Then apply your favourite care cosmetic, e.g. serum or cream.

How to use Skin Lift ampoules?

- when you need to look special, e.g. before a planned ceremony
- in the form of a skin revitalizing treatment every 2-3 days

Let Skin Lift ampoules become your secret ally in the fight against the passing time. Introduce them to your care routine and feel the difference! Regardless of your lifestyle, diet or genetics, with our ampoules, your skin will look much younger.
